SKC is launching high-end hard coated polyester films.

The UV-Cured Hard Surface Coated Films have gone through scratch resistance processing using the SKC Haas UV coating technology, and as a result have the following features:

- o High stability in dimensions
- o Excellent durability and surface hardness

- o All products are manufactured under the circumstance of high degree of cleanliness, so they are widely used in electronic parts that require high reliability.

Consequently, it is used as functional materials for protection of electric/electronic products and in various industries (LCD panel surface protection, membrane touch switch overlay, whiteboards, electronic boards, etc.)
