SKC developed Flexible Ferrite Sheets for RFID / NFC / Wireless Charging

Ferrite Sheet is a necessary part for securing reliability and safety of RFID / NFC communication system. It extends communication networks by shielding EMI which is generated on a conducted board and by maintaining electromagnetic coupling between writer and reader(tag).

SKC Ferrite sheets have distinct features that they are flexible sintered ferrite sheet with high magnetic permeability and low magnetic loss at 13.56 MHz. Also, we can customize magnetic properties, sizes and shapes by the needs of customers.

SKC Ferrite sheets are suitable for RoHS and halogen-free.
