SKC developed Heat Spreader Sheets.

Heat Spreader is a type of thermal interfacial materials (TIM), which are thermally conductive materials for discharging heat generated by electronic components.

SKC Heat Spreader is a sheet type with strengths as follows.

- Superior thermal conductivity
(Vertical: 4~8 W/mK, Horizontal: 200~400 W/mK)
- Thermostable
- Wide Variety of types (filter, metal, and other combinations)
- Good processability and Operation property
- No Dust

Please contact us for production information in detail.
