SMP is promoting new window films

SMP is launching window films for automobile, residential & commercial, and safety and security applications.

SMP window films are made of color-tinted polyester films, which have better clarity and colorness than dyed films or glue-tinted films. Currently, VLT05 (142ga), VLT 25, VLT 35 (92ga) with charcoal black color are available. SMP is doing only wholesales of these window films.

If you need any information of Window films, please contact us further information.
